Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions

S.No	Item to Submit	Submitted
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes

5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	N/A
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Dockerfile / Containerization config (if applicable)	N/A
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: file/folder Structure:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Local API Project
Login Credent	Registered user credentials used through the API

ials (Demo)	
Platform / Hosting Provider	Local Node.js / Express.js Server
Repository Link	<u>https://github.com/bharathbb8835331-creator/My-project-</u>
Demo Video Link	<u>https://drive.google.com/drive/folders/1eeicJeiXL2fzdQnAjcZPq2JKwrAPzXuc</u>

Step 4: Run Instructions

Pre-requisites:

Node.js installed

MongoDB available

Google Gemini API key

Project source code

Postman or Thunder Client for API testing

Step 1:

Clone or download the project repository.

Step 2:

Open the project folder in Command Prompt / Terminal.

Step 3:

Install the required dependencies:

npm install

Step 4:

Configure the required environment variables in the .env file.

Step 5:

Start MongoDB.

Step 6:

Start the Node.js server:

```
npm run dev
```

Step 7:

Use Postman or Thunder Client to test the API endpoints.

Step 8:

Test the main API functions such as:

User Registration

User Login

FAQ Creation

FAQ Search

AI Answer Generation

Step 5: Known Issues / Limitations

S.no	Known Issue / Limitation	Workaround / Status
1	Google Gemini API requires a valid API key	Configure the Gemini API key in the environment configuration
2	MongoDB connection is required for storing and retrieving data	Ensure MongoDB is running and the connection string is configured correctly
3	AI response depends on the availability of the Gemini API	Check API key, network connection and API response if an error occurs
